

## Cash Receipts

Cash receipts are computed as marketing volume multiplied by the price and are usually reported on a **calendar-year** basis. Marketings come from current production or storage of past year's crop (assuming a crop is storable, such as potatoes). Thus, the quantity available for sale (marketings), can be thought of as coming from current production less shrinkage and the amount used on farms for food, feed, and seed plus change in stored

quantity (inventory). On the other hand, value of production, which is generally reported as a **crop-year** statistic, is computed as production multiplied by the average price. The difference between value of production and cash receipts is usually only important to those commodities which can be stored and thus have a specific marketing pattern which extends through time from the date of harvest.

### Cash Receipts: All Commodities 1/

Commodity	2003	2004	2005	2006	2007 2/
	----- 1,000 Dollars -----				
Cotton lint, all	177,240	125,511	153,183	128,140	140,580
Cottonseed	26,037	34,394	30,325	29,229	29,314
Hay	107,040	113,038	139,812	171,849	195,177
